

K'NEX Simple Motorised car

This simple model can be built using either:

1. the parts supplied in the 13419M Classic K'NEX 70+10 model Motorised set, or
2. a 12211 K'NEX 50-model set or a 13419 K'NEX 70-model set plus our exclusive K'NEX Motor Add-on pack for 50- or 70-model set.

Stage 1

To build the base of the motorised car:

- Fix a white connector to either side of the motor
- Push a yellow rod right through the white connectors and motor (you will need to push quite hard)
 - On each end of the yellow rod, add two blue spacers and a tan interlocking clip facing outwards
 - Add the other parts as shown in the photo
 - Handy Hint W4 provides more information about the use of tan interlocking clips to connect wheels to rods.

Stage 2

Finally, add four wheels, and then test your motorised car, forwards and backwards.
