

# K'NEX Simple motorised Fan

This simple model can be built using either:

1. the parts supplied in the 13419M Classic K'NEX 70+10 model Motorised set, or
2. a 12211 K'NEX 50-model set or a 13419 K'NEX 70-model set plus our exclusive K'NEX Motor Add-on pack for 50- or 70-model set.

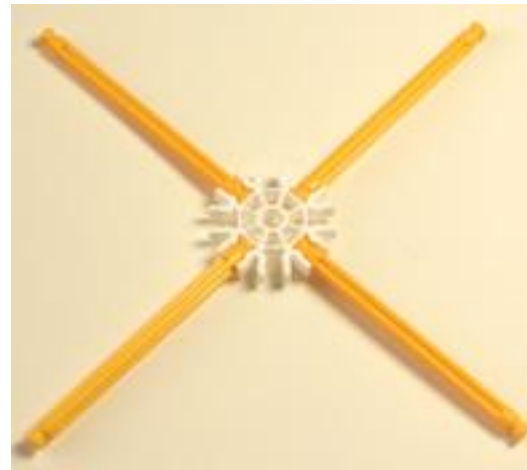

## Stage 1

The first stage of assembly is to build a base for the fan...

## Stage 2

... The shaft that will drive the fan blade...

## Stage 3

... And the fan blade.

#### Stage 4

Then fit the lugs on one side of the motor into the white connector at the centre of the base...

#### Stage 5

... insert the shaft into the motor (you may have to push quite hard) ...

#### Stage 6

... and finally fix the fan blade onto the top of the shaft, so that the upwards-facing lug of the Tan interlocking clip fits into the white connector at the centre of the fan blade.

Your fan is now complete, and you can test it by switching on the motor.
